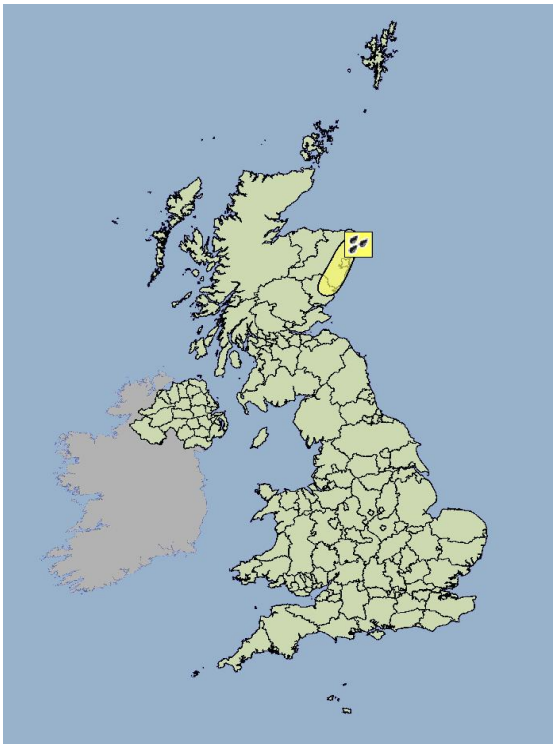
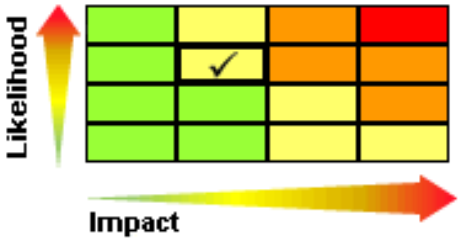
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system over Scotland will slowly clear north later on Saturday. Another 10-20mm of rain is likely in the northeast, especially over the higher ground, before it turns drier from the south. This warning has been updated, reducing its southern extent and bringing forward the end time, due to a faster clearance of the rain.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **10:20 on Sat, 04th Mar 2017** until **18:00 on Sat, 04th Mar 2017**

Persistent and occasionally heavy rain will affect much of Northeast Scotland, before gradually dying out from the south during the afternoon and early evening. Some difficult driving conditions are likely due to surface water and spray, with localised flooding perhaps causing some low level travel disruption.
